

Your **ONE** source
for the widest selection
of COTS software radio
solutions just got better...

New GateFlow™ FPGA Resources

Adding FPGAs to the world's largest software radio line was only the beginning. Now, Pentek's GateFlow offerings give you three different strategies for extending FPGA functions to boost system performance and help you beat the competition.

Add Your Own FPGA Functions: The GateFlow™ Design Kit — complete with source files and utilities — streamlines custom FPGA development for Pentek products.

Highly-Optimized IP Cores: The GateFlow™ IP Core Library includes FFTs with 10x speed improvements to handle 500 MHz real-time data and wideband digital receivers that double the bandwidth of ASIC alternatives.

Off-the-Shelf FPGA Functions: The GateFlow™ Installed Cores are pre-installed on Pentek FPGA-based products for no-hassle, plug-and-play performance — guaranteed!

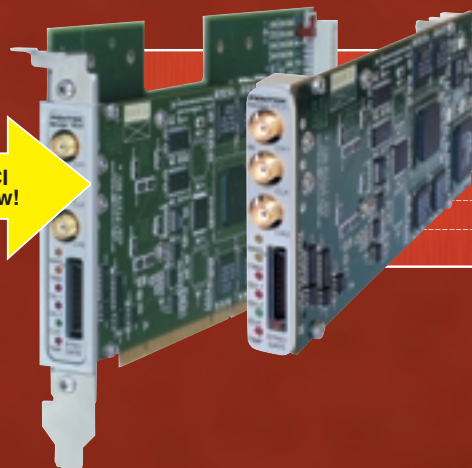

Only Pentek answers all your system needs with one-source solutions for ensured compatibility. Count on Pentek for lifetime technical support and complete, application-ready solutions.

PMC and PCI
Available Now!

- Radar, SIGINT and Wireless
- FPGA, PowerPC and C6000 DSPs
- A/D sampling rates over 100 MHz
- Synchronous from 2 to 2,550 channels
- VIM,® RACEway,™ FPDP, Fibre Channel
- Xilinx, VxWorks, Linux and TI support
